**Resilient Research, Practice, Managing Disruptive & VUCA  
Multiple Alternatives, Issue Management, on Future Equity  
-A journey of 'Collaborating with Indian Management'**

It was fascinating to see how many people were discussing their roles for sustainability. In my lecture, I tried to show using many case studies and stories about a business. When I asked you to think of business as a marketplace, a well-considered model for the future, but because we're already embedded through structure and impact of human activity.

I learned myself on this journey to help entrepreneurship and see to benefit and apply other on the economy. For those very business to have had a long, successful, meaningful, using it to help a generation of business for many new business products.
